On 29 September, World Heart Day will be an opportunity for everyone to stop and consider how best to use heart for humanity, for nature, and for you. Beating cardiovascular disease is something that matters to every beating heart.

Access to treatment and support for CVD varies widely across the world. Over 75% of CVD deaths occur in low- to middle-income countries, but access can be an issue anywhere.

Air pollution is responsible for 25% of all CVD deaths, taking the lives of 7 million people every year. Each of us can contribute to a healthier planet in our own way.

Psychological stress can double heart attack risk. Resisting harmful coping mechanisms and bad habits induced by stress helps maximise our individual heart health.

Visit worldheartday.org and follow us on social media to find out how you can get involved—we’ll be adding lots of resources, tips and info in the run up to 29 September.
