Our goal is to stop the world's biggest killer.

THIS YEAR ON WORLD HEART DAY

Cardiovascular disease (CVD) is the world's number one killer. Combined, conditions affecting the heart or blood vessels – such as heart attack, stroke and heart failure – kill 20.5 million every year. The majority of these deaths happen in low- and middle-income countries.

We want to bring this number down – way down. And there's hope: 80% of premature deaths from CVD are preventable. By making small changes to our lifestyle – what we eat and drink, how much we exercise, and how we manage stress we can better manage our heart health and beat CVD.

YES

The World Heart Federation (WHF) is an umbrella organisation representing the global cardiovascular community, uniting more than 200 patient, scientific and civil society groups. Together with its Members, WHF influences policies, shares knowledge, and inspires behaviour change to achieve heart health for everyone.

USE **FOR**

Demand action to save lives.

ACTION

World Heart Day on 29 September is a global, multi-lingual celebration.

Spanning six continents, our hundreds of World Heart Federation (WHF) member organizations, the countless schools, universities, sports clubs and the vibrant cardiology community make World Heart Day (WHD) a truly global celebration.

Visit worldheartday.org and follow us on social media to find out how you can get involved – we'll be adding lots of resources, tips and info in the run up to 29 September.

IN PARTNERSHIP WITH

WORLDHEARTDAY.ORG

WHO?

WHY?

HOW?

We will send a powerful message to leaders worldwide by calling on everyone to sign the first global petition prioritizing heart health.

or simply don't exist.

WHAT? World Heart Day is a reminder to everyone

for cardiovascular disease.

We know that too many countries

National policies for cardiovascular

disease are often lacking, insufficient,

We are supporting individuals to urge their

leaders to take cardiovascular health seriously by providing a global platform for action.

do not prioritize heart health.

around the world to take care of their hearts.

This year's campaign focuses on motivating

every country to have a national action plan

USE **>**TO EAT WELL

- Cut down on sugary beverages and fruit juices choose water or unsweetened juices instead.
- Swap sweet, sugary treats for fresh fruit as a healthy alternative.
- Try to eat 5 portions (about a handful each) of fruit and veg a day they can be fresh, frozen, tinned or dried.
- Keep the amount of alcohol you drink within recommended guidelines.
- Limit processed foods that are often high in salt, sugar and fat unpack and unwrap less, peel and cook more!
- Search online or download an app and get lots of heart-healthy recipe tips.

USE **V**TO SAY NO TO TOBACCO

- Within 1 year of quitting, the risk of coronary heart disease is substantially reduced.
- Within 15 years the risk of CVD returns to that of a non-smoker.
- Exposure to secondhand smoke is also a cause of heart disease in non-smokers.
- By quitting/not smoking you'll improve both your health and the health of those around you.
- If you're having trouble stopping, seek professional advice and ask your employer if they provide smoking-cessation services.
- E-cigarettes and other electronic nicotine delivery systems are not harmless alternatives to cigarettes and are linked to an increased risk of cardiovascular disease.

- Aim for 150 300 minutes of moderate-intensity or 75 150 minutes of vigorous intensity physical activity throughout the week.
- If you can do more, go for it! Being more active will bring more health benefits and help offset the negative impact of sedentary lifestyles.
- Be more active every day take the stairs, walk or cycle instead of driving. Playing, walking, housework, dancing they all count!
- On two or more days a week, you should also do some muscle strengthening exercises involving all major muscle groups.
- Download an app or use a wearable device to keep track of your steps and progress.

"Find a physical activity you truly enjoy and set small, achievable goals to keep yourself motivated. Remember, staying active isn't just about intense workouts — it's about moving your body and having fun."

Shakib Al Hasan, cricket player, Bangladesh

DID YOU KNOW?

High blood pressure is one of the main risk factors for CVD. It's called the 'silent killer' because it usually has no warning signs or symptoms, and many people don't realise they have it.

DID YOU KNOW?

High blood glucose (blood sugar) can be indicative of diabetes. CVD accounts for the majority of deaths in people with diabetes. If left undiagnosed and untreated, diabetescan put you at increased risk of heart disease and stroke.
