To embed the World Heart Day 2024 petition to prioritise heart health on your website, copy the code below:

<iframe src="https://world-heart-federation.org/sign-the-petition-embed/?organization=**Organization Name**" width="500" height="1000"></iframe>

Swap "**Organization Name**" for your organization. For example:
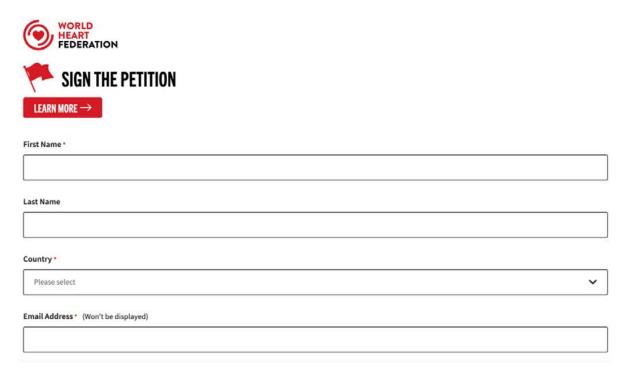

<iframe src="https://world-heart-federation.org/sign-the-petition-embed/?organization=World Heart Federation" width="500" height="1000"></iframe>

You can adjust the width and height properties as needed, but please do not change the 'src' property beyond adding your organization name. Doing so will cause the embed to break. We recommend a minimum width of 500. A minimum height of 1000 will ensure the entire petition fits onto the page without the embed becoming scrollable. For more advanced customisation, you can add ID or class properties to target the embed with CSS.

If your site uses plain HTML, you can paste the code snippet into the file where you want the petition to appear. Beyond adjusting the width and height, you don't need to do anything else.

If you are using a Content Management System or a site builder, there is usually a block or an option which allows you to add HTML code to your site. Paste the code snippet, adjust the width and height as needed, and save your site as normal.

Here is an example of what you should see on your site's front end if the embed is working correctly:

If you need help embedding the petition into your site, please contact your developer.
