# Message from the President and CEO

The year 2005 can be described as a year of tangible growth and development for the World Heart Federation. We have made real progress in each of our four strategic pillars of activity: awareness-building, advocacy, demonstration projects and the sharing of science. Year on year, we continue to hold ourselves to a higher standard of performance, and this year is no exception. There is so much work to be done to prevent and control heart disease and stroke, particularly in low and middle income countries. The active engagement of our member and partner organizations is an essential element of our success. Our Board members and supporters deserve a particular word of thanks for their generous gifts of time, energy and action.

Since September 2000, when we first launched World Heart Day, we have worked **to increase awareness** among the global population of cardiovascular disease as the leading cause of death worldwide. We have sought to build up health literacy about risk factors and the very real opportunity that individuals and communities have to prevent heart disease and stroke. Our World Heart Day programme is successful because our member organizations work so hard to get our message across. Grassroots actions have a multiplier effect. The programme has grown dramatically and today involves members in 100 countries, reaching over 400 million people through the media. Our efforts have been recognized again in 2005 with a *Third Sector* public relations excellence award. Also in 2005, we launched a partnership with the American Heart Association to develop their Go Red For Women programme internationally. This initiative will enable us to reach women around the globe. The majority of women today are unaware of their cardiovascular risk: there is much we can do to change that.

**Advocacy for policy change** that can benefit population health and patient care is a major focus for our Board, staff and membership. This year, we spoke out about why we firmly believe that heart disease, stroke and other chronic diseases must be included in the United Nations Millennium Development Goal process and programmes. Low and middle income countries face a dramatic escalation in risk factors which we must begin to address now and not later. We have started this advocacy process with an editorial in the *Lancet*. Much more will follow. We continue to work with policy-makers to promote the Framework Convention on

Tobacco Control and to implement the World Health Organization's Global Strategy on Diet, Physical Activity and Health. Progress is tangible, particularly in the area of tobacco control. A total of 116 countries had ratified the Framework Convention by the end of 2005. We join with our colleagues in celebrating new smoke-free legislation in Ireland, Norway, New Zealand and the Philippines, and hopefully in many more countries and cities to come.

In addition to building awareness and advocating for policy change, we have launched a number of high-potential **country demonstration projects**, together with ministries of health and our member organizations. We have signed a global memorandum of understanding with Sesame Workshop and have agreed to pilot an early childhood education programme in Colombia. We believe it is critical to reach out to children, so that they can learn to make healthy choices and add healthy years to their lives. We have also completed the pilot phase of our Grenada Heart Project on the three-island Caribbean State of Grenada. The pilot study revealed an increasing prevalence of hypertension and diabetes, two risk factors that will require changes in the health system and community-based interventions if they are to be controlled. These two demonstration projects add breadth and depth to our in-country programmes, alongside ongoing work in Rheumatic Fever/Rheumatic Heart Disease in the Pacific Islands and the "Bridging the Gap" guideline implementation programme in China. Our vision is that these projects will be replicable in other low and middle income countries and thus provide good examples for members to imitate and improve upon.

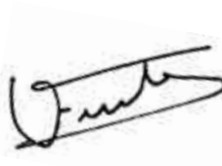

Our last pillar, **sharing science and building capacity**, is critical to achieving our mission. We share science through congresses, such as the International Conference on Preventive Cardiology, held jointly with our Council on Epidemiology and Prevention in Foz do Iguacu, Brazil, as well as the Second International Conference on Women, Heart Disease and Stroke, held in Orlando, Florida, United States of America, and the World Congress of Cardiology currently in preparation in Barcelona, Spain, for September 2006. Our journals, *Prevention and Control* and the newly added *Nature Journal*, reach out to our membership and beyond, addressing issues in community health and patient care respectively. Capacity-building meetings have been

held at regular intervals with our heart networks in Latin America, the Asia Pacific region and Africa. These form the cornerstone of our efforts to strengthen heart foundations in low and middle income countries.

Fortunately, all our pillars of activity have proven attractive to a wide range of donors and supporters, including corporate partners, foundations and major individual donors. As a result, we are closing the **2005 financial year** on a very positive note. A large part of the funds received in 2005 will be spent developing our activities in 2006 and beyond.

Our work in partnership with the World Health Organization, the United Nations and the World Economic Forum continues to be essential to effective programme implementation. The Global Alliance for the Prevention of Obesity and Related Chronic olving the International Obesity Taskforce, the International Diabetes Federation and others, is critical to our efforts to improve diet and increase physical activity in many places around the globe.

Thanks go to all the members and many other stakeholders of the World Heart Federation for helping to make this year so encouraging, and enabling us to take another large step forward in our efforts to implement our mission.

*Valentin Fuster*  
President

*Janet Voûte*  
Chief Executive Officer

# The World Heart Federation

The World Heart Federation is an international nongovernmental organization based in Geneva, Switzerland, dedicated to the prevention and control of cardiovascular disease around the world. It is a membership organization that brings together the strength of the medical community (societies of cardiology) with the public health community (heart foundations). Its 186 member organizations operate in over 100 countries at both national and regional level. Together with its members, the World Heart Federation carries out its mission through a four-pronged approach: it raises awareness of the burden of cardiovascular disease and its risk factors among the general public, healthcare professionals and policy-makers; it advocates for measures to address the rising global burden of cardiovascular disease, particularly in low and middle income countries; it carries out demonstration projects in specific low-resource settings, which can then be replicated; it shares science and builds capacity, notably through congress activities, the work of the organization's Scientific Advisory Board and Councils, as well as the regional networks of member organizations.

## The global burden of cardiovascular disease

With approximately 17 million deaths per annum worldwide, cardiovascular disease is currently the leading cause of death in every region of the globe except for the lowest-income countries, and even there, it is on the rise. Thus, 80% of cardiovascular deaths and 87% of related disabilities occur in low and middle income countries.

Cardiovascular disease strikes younger working-age people in these countries at higher rates than in developed countries, clearly affecting their economic growth. Mortality from cardiovascular disease among working-age people in India, South Africa and Brazil was found to be one-and-a-half to two times as high as that of the United States of America<sup>1</sup>.

Children are increasingly threatened through the combined impacts of tobacco and obesity. In the Indian component of the Global Youth Tobacco Survey (2000–04), 25% of students aged 13–15 years reported that they had ever used tobacco, and current use was reported at 17%<sup>2</sup>. In China, one fifth of

children aged 7–17 years in big cities are overweight or obese<sup>3</sup>. Cardiovascular disease in women has been ignored for too long. Yet it causes 8.6 million female deaths annually<sup>4</sup> and is the number-one killer of women worldwide, killing more women each year than all types of cancers, HIV/AIDS, malaria and tuberculosis combined.

Yet, despite the overwhelming evidence, cardiovascular disease and other chronic diseases are being ignored by policy-makers and donor agencies. They are not included – or even mentioned – in the United Nations' Millennium Development Goals (MDGs).

The overwhelming evidence of the rising burden of cardiovascular disease and other chronic diseases alongside infectious disease in low and middle income countries needs to be addressed. In a message of support for the 2005 World Health Organization report *Preventing chronic diseases: a vital investment*, President Olusegun Obasanjo of Nigeria states: "We cannot afford to say 'we must tackle the other diseases first — HIV/AIDS, malaria, tuberculosis — then we will deal with chronic diseases'. If we wait even 10 years we will find that the problem is even larger and more expensive to address." The causes of cardiovascular disease are known. Cost-effective preventive measures can be taken at policy, national and community levels to deal with risk factors in order to reduce cardiovascular death and disability by more than 50%. The World Heart Federation and its member organizations are committed to and engaged in action to prevent and control cardiovascular disease around the world.

# Activities

## Awareness

The World Heart Federation builds public awareness about the cardiovascular disease epidemic and disseminates information relevant to its prevention and control.

### World Heart Day

For the past six years, World Heart Day has been extremely successful in reaching the public at large in many countries throughout the world, with the aim of raising awareness and promoting preventive measures to reduce the incidence of cardiovascular disease in the global population. This year was no exception. On Sunday, 25 September, World Heart Day was celebrated in over 100 countries on all continents. This year's theme, "Healthy Weight, Healthy Shape", focused specifically on waist circumference as a very important measure of cardiovascular risk, evidenced by recent scientific data. This was an opportunity to educate the public on matters such as energy balance, weight control, healthy eating and the need for physical activity at all ages.

The World Heart Federation was proud to have former United States President Bill Clinton lend his voice to reinforce the need to instil healthy habits in children at the earliest age possible. The continued involvement of the Union of European Football Associations (UEFA), as well as the support this year of world number-one tennis champion, Roger Federer, bolstered the special attention given to the importance of regular physical activity and sport.

Heart foundations and societies of cardiology around the world marked the event in numerous creative ways. The following are just a few examples. The Singapore Heart Foundation held a two-day heart fair attracting over 60 000 participants, with health screening, aerobics classes, health quizzes, exhibits, school performances, nutritional counselling, food sampling, etc. In Cameroon, free weight and blood pressure checks were carried out in 10 community hospitals under the patronage of the Minister of Public Health. In addition, the first ever Cameroon Hypertension and Diabetes Fair was organized in Yaoundé. In Argentina, an extensive information campaign was carried out. Cooking classes and heart-healthy food tasting featured among the activities. In Turkey, "Dance for your Heart", a street dance event, had people from the age of 4 to 80 dancing together to the beat of pop and tango.

Many partner organizations participated in the World Heart Day campaign. The International Council of Nurses distributed the material to all national nurses' associations around the world. Cooperation with the United Nations was reinforced. In addition to the World Health Organization (WHO) and UNESCO, which pursued their involvement both at regional and national levels, World Heart Day was co-sponsored by "Sport 2005", the United Nations International Year of Sport and Physical Education.

# Activities

## Go Red For Women

Cardiovascular disease is the number-one killer of women worldwide, yet women are dangerously uninformed about their level of risk. For this reason, on the occasion of the Second International Conference on Women, Heart Disease and Stroke, in Orlando, Florida, United States of America in February 2005, the World Heart Federation announced that it will be taking the Go Red For Women campaign to the global level in 2006. The extremely successful Go Red For Women campaign was created by the American Heart Association to empower women with the knowledge and tools they need to take charge of their heart health, as well as increasing the attention given to heart disease and stroke among the medical community. Thanks to the global roll-out of this campaign, member organizations of the World Heart Federation will be able to benefit from the tools and lessons learned from the American Heart Association programme, while adapting them to their own national environment.

The year 2005 saw the build-up to the global launch of Go Red For Women. The World Heart Federation created a variety of materials which it distributed to its member organizations. Red dress pins, tape measures, educational leaflets and a CD-ROM of presentations given during the International Conference were sent out to all 186 heart foundations, societies of cardiology and associate member groups. By the end of the year, member organizations from 25 countries representing all continents had committed themselves to the Go Red For Women campaign, to be launched in February 2006.

## Communications

World Heart Federation press activities focused to a great extent on the organization's awareness campaigns, World Heart Day and Go Red For Women, although congress activities, joint initiatives with the United Nations and corporate

partnerships were also highlighted. Particular attention was devoted to calling for the expansion of the health-related Millennium Development Goals to encompass chronic disease, including cardiovascular disease. The World Heart Federation held a press conference on this topic at the European Society of Cardiology Congress in Stockholm in September 2005, just one week before the 2005 World Summit, where Heads of State and Government met at the United Nations for the first comprehensive review of the Goals.

The World Heart Federation and its international public relations consultancy, Cohn & Wolfe, were proud to receive a *Third Sector* Excellence Award for the 2004 World Heart Day campaign. *Third Sector* is the UK's leading magazine in the charity and not-for-profit world, and the Excellence Awards are dedicated to celebrating the success and achievements of this sector. The awards recognize excellence in areas ranging from business strategies to marketing, individual and group performance, and cover activities from fundraising to campaigns, finance and human resources. World Heart Day 2004 won the award for the "Best International Campaign", which most effectively reached target audiences and raised awareness in many countries.

The World Heart Federation pursued its efforts to improve and intensify its communications with its members and partners. A new "members only" section was created on the website as a means of providing exclusive information, announcements, training modules and marketing tools for the member network. *HeartBeat*, the organization's quarterly newsletter, continued to keep members abreast of developments and new initiatives in the field of cardiovascular disease prevention around the world.

## Advocacy

The World Heart Federation advocates globally for greater investment in cardiovascular disease prevention and policies to reduce major lifestyle risk factors: tobacco use, unhealthy diets and physical inactivity. Priority has been given to programmes that focus on children and the community.

### Global health agenda

The World Heart Federation focused much of its advocacy efforts in 2005 on the need to expand the global health agenda to address the rising burden of cardiovascular disease in low and middle income countries and its impact on the poor. Chronic diseases in developing countries, including cardiovascular disease, are largely ignored and have been excluded from the Millennium Development Goals (MDG).

Dr Valentin Fuster, President of the World Heart Federation, personally held discussions with many of the chairpersons of the United Nations committees working on the Goals, advocating the need to address cardiovascular disease among the Goals related to poverty reduction.

In an editorial published in the *Lancet*<sup>6</sup>, the World Heart Federation stated its commitment to joining the MDG process at both international and national levels, in order to contribute to the effort to achieve better health and reduce poverty by the target date of 2015. Four compelling arguments for including cardiovascular disease and other chronic diseases in the MDG process were put forward. First: the most recent global burden-of-disease data clearly reveal the predominance of cardiovascular disease and other chronic diseases. Second: cardiovascular disease strikes younger working-age people in these countries, at higher rates, clearly impacting economic growth while increasingly threatening children through the combined impacts of tobacco and overweight. Third: health systems cannot be built vertically, disease by disease. Health

personnel can add strength to weak systems by incorporating cardiovascular disease and other chronic diseases. And fourth: there are cost-effective policy, programme and treatment initiatives for cardiovascular disease and other chronic diseases that could have a major positive impact on poverty and general health.

### Tobacco control

On 27 February 2005, the WHO Framework Convention on Tobacco Control (FCTC) entered into force after 40 countries had signed. The Convention sets international standards for tobacco price and tax increases, tobacco advertising and sponsorship, labelling, illicit trade and second-hand smoke, among many other issues. It still remains open for ratification, acceptance or approval by countries that have signed the Convention, and for accession by those that have not signed. By the end of 2005, a total of 168 signatories and 116 Contracting Parties had acceded to the Convention.

The World Heart Federation is a fervent supporter of the Framework Convention and encourages its member organizations to be involved in its implementation, notably by lobbying for ratification and the enactment of national legislation in accordance with its provisions. In 2005, the World Heart Federation specifically appealed to member organizations to lobby their governments to ratify the Convention, thus entitling them to attend the first Conference of the Parties, convened in February 2006. This Conference reviewed national reports, provided further guidance on proper implementation of the Convention, initiated negotiations on protocols to the Convention and promoted the mobilization of financial resources.

World No Tobacco Day 2005 was held on 31 May under the banner "Health Professionals: a Role to Play", emphasizing the role of health professionals in tobacco control and the need for their active contribution to the reduction of tobacco consumption. Indeed, health professionals are trusted sources of

# Activities

information and advice, and are themselves role models in matters related to health. They are in contact with a high percentage of the population and can be instrumental in helping people change their behaviour. On this occasion, the World Heart Federation made available the WHO World No Tobacco Day 2005 materials to its members through its web site and at its congress booth, and suggested specific activities to be carried out in-country to mark World No Tobacco Day.

## Healthy diet and physical activity

Following the approval by the World Health Assembly of the WHO Global Strategy on Diet, Physical Activity and Health, the World Heart Federation joined the International Association for the Study of Obesity, with its International Obesity Taskforce, the International Diabetes Federation, the International Union of Nutritional Sciences and the International Pediatric Association, in creating the Global Alliance for the Prevention of Obesity and Related Chronic Disease. The members of the Alliance signed a joint statement of intent inviting the support of their national member organizations to work together to enforce the Global Strategy at national level in order to tackle the rising burden of obesity and related chronic diseases.

The Alliance began work immediately on the first ever global action plan dedicated to the prevention of obesity, with its amplified risks for diabetes, heart disease and other chronic diseases and with special emphasis placed on the prevention of childhood obesity, particularly where it affects those in deprived and disadvantaged communities and countries. The plan provides for the creation of national councils in a number of key countries where Alliance members have a strong member network. These councils will develop national action programmes to support the WHO Global Strategy and will serve as best-practice prevention models for the prevention of childhood obesity as an essential first step towards preventing chronic diseases. These programmes will be replicated in

similar settings. Brazil, Canada, Hong Kong, Malaysia, Singapore and Thailand were identified as the key countries, and national councils are now being created in each of these countries.

Obesity was once again on the agenda of the annual meeting of the World Economic Forum, held in Davos in January 2005. For the second year running, the World Heart Federation was invited to participate. Chief Executive Officer Janet Voûte was asked to speak in sessions focusing on the role and responsibilities of both industry and governments in the effort to change individual behaviour patterns as a way to counteract the huge cost to society and the economy of the rising global burden of obesity.

The importance of physical activity within the broad agenda of chronic disease prevention and health was given prominence in 2005 in other forums. The United Nations General Assembly declared 2005 to be the International Year of Sport and Physical Education. With this initiative, the international community undertook to promote sport and physical education further as a tool for health, education, social and cultural development. The World Heart Federation was one of the partner organizations of "Sport 2005".

This year's theme for WHO's "Move for Health" day was "supportive environments", highlighting the link between physical-activity-friendly environments and the individual's level of engagement in sport and exercise. The World Heart Federation worked through its member organization network to increase the involvement of nongovernmental organizations in the event.

<sup>6</sup>Fuster V, Voûte J. MDGs: chronic diseases are not on the agenda. *Lancet*, 2005, 366(9496):1578-82.

# Activities

## Demonstration projects

The World Heart Federation aims to reduce cardiovascular disease risk factors measurably, using resource-appropriate demonstration projects implemented at both population and high-risk-individual levels. Priority has been given to programmes that focus on children and the community.

### Colombia Model Youth Programme

An exciting new development this year was the signing of a Memorandum of Understanding with Sesame Workshop, opening the door to working with the highly successful children's television education programme "Sesame Street" on its international "Healthy Habits for Life" initiative, a comprehensive effort to help young children and their parents live healthier lives. The first project to be developed under the partnership will begin in Colombia in 2006.

The Colombia Model Youth programme also enables youth leaders from Latin America to participate in the first Global Youth Meeting for Health, organized by the Indian association Hriday-Shan, in Delhi, India in 2006. This meeting will bring together youth leaders from around the world for a six-day workshop which aims to sensitize them to health promotion issues and provide them with a platform to debate these issues internationally and then back in their own countries.

### Grenada Heart Project

This five-year project, carried out jointly by the World Heart Federation, Ministry of Health of Grenada and University of Rochester Medical Center, United States of America, has completed its first year. The project presents a historic opportunity to intervene in a community at a pre-coronary-disease stage of the epidemiological transition. It aims to develop and implement an opportunistic primary prevention programme and an economically sustainable secondary prevention

programme for persons at risk, based on the knowledge gained from community and risk factor assessments of the population. The strategies and outcomes will have applications for other developing countries.

Grenada in the West Indies is a tri-island state comprising the islands of Carriacou, Petit Martinique and Grenada itself. In 2005, project activities focused on: setting up the appropriate structure, procedures, tools and coordination processes; qualitative assessments of the situation on the islands of Petit Martinique and Carriacou; and a pilot survey on the small island of Petit Martinique.

The qualitative assessments on Petit Martinique and Carriacou enabled the team to identify beliefs, practices and attitudes held by the population around topics of relevance to heart disease, its risks and prevention. Key dimensions of exploration included concepts related to health and limits to good health, heart health, health locus of control and spirituality, blood pressure and hypertension, cholesterol, diabetes, exercise, diet, smoking, weight and body image, stress, impact of migration, medical care and health systems, as well as attitudes towards the study.

These assessments were followed by an in-depth survey of 226 adults on the island of Petit Martinique, during which, in addition to a questionnaire, each participant was screened for blood pressure, blood lipids, cholesterol levels, height and weight and calculation of body mass index. Individual counselling was given based on the test results, and referrals were made to the existing medical system when necessary. Although the analysis of the results of the survey had not been completed by the end of the year, indications seem to confirm that both Petit Martinique and Carriacou are in the early stages of epidemiological transition, with rheumatic heart disease, stroke, hypertension and diabetes forming the major chronic disease burdens. It is speculated that the strikingly low blood cholesterol levels, the fish/fruit/vegetable-rich diet and the level of physical activity have so far prevented a progression to a full coronary disease epidemic.

# Activities

## **South Pacific Rheumatic Fever/Rheumatic Heart Disease Secondary Prevention Programme**

Rheumatic fever and rheumatic heart disease (RF/RHD) are the most common cardiovascular diseases in children and young adults and remain a major public health problem in developing countries. This three-year project, carried out in partnership with the Ministries of Health of Fiji and Samoa and the University of Melbourne, Australia, aims to define a regional comprehensive model for secondary prevention of RF/RHD in the South Pacific, which has the highest incidence of RF in the world.

The project comprises three core components: the establishment of demonstration projects in Fiji and Samoa with a view to these becoming long-term national RHD control programmes; the training of key public health practitioners and clinicians from other South Pacific Island countries; and the development of global training and health promotional materials which can be used in other regions.

By the end of the year, a computerized database able to generate relevant epidemiological reports and manage cases had been designed, tested and adapted to suit the specific needs of Fiji and Samoa. It is now in use in both countries. A mobile echocardiogram machine had been purchased for each country in order to improve diagnosis and follow-up of suspected RHD patients in both clinics and schools.

A curriculum, manual and guidelines have been drafted for both the Fiji and the Samoa projects in preparation for local training workshops due to take place during 2006. In addition, international RF/RHD materials have been collated and a curriculum is being drafted for a regional South Pacific training workshop, to be held in Fiji in 2006.

## **Keep your Heart Healthy, Ekaterinburg, Russian Federation**

In March 2005, the social marketing demonstration project carried out in the city of Ekaterinburg came to an end. This project,

carried out in partnership with the city's Public Healthcare Administration and the Russian Society of Cardiology, aimed to use social marketing tools to increase awareness and change attitudes regarding cardiovascular disease and its risk factors, as well as to increase the involvement of health professionals in counselling patients on lifestyle and prevention. While the detailed analysis of the endline survey is still ongoing, the results should enable all partners to build on the methodology, lessons learned and successes of this initial campaign, with the hope of replicating it elsewhere in similar settings.

## **Bridging the Gap, China**

The "Bridging the Gap" project, launched in September 2005, aims to bridge the gap between secondary-prevention coronary heart disease guidelines and clinical practice in China and to improve the quality of care in patients with acute coronary syndrome. The project focuses on the utilization of therapies (pharmaceutical and nonpharmaceutical) recommended by guidelines for patients hospitalized with acute coronary syndrome in member hospitals of the China National Healthy Heart Programme. The World Heart Federation is involved in this project, alongside the Chinese Society of Cardiology, Project Hope and the George Institute for International Health, Australia.

The project protocol specifically seeks to identify common problems and barriers to the implementation of guidelines for secondary prevention in routine cardiology clinical practice in China. It looks at evaluating the effectiveness and sustainability of quality of care for patients with acute coronary syndrome in targeted hospitals. It also looks at evaluating the long-term effectiveness of this programme on the quality of care and cardiovascular outcomes for discharged patients, as well as the interventional strategies initiated by community doctors and hospitals.

# Activities

## Sharing science and building capacity

The World Heart Federation shares science and assists in capacity-building for cardiovascular disease prevention at a global level with member networks, societies and foundations, and in developing a broad-based consensus on key strategies and tools.

### Congresses

In 2005, the World Heart Federation was involved in organizing two international congresses, the Second International Conference on Women, Heart Disease and Stroke, held in February in Orlando, Florida, United States of America, and the Sixth International Conference on Preventive Cardiology, which took place in May in Foz do Iguaçu, Brazil.

The Second International Conference on Women, Heart Disease and Stroke, attended by 600 participants, mostly women, from 48 countries, was cosponsored by the American Heart Association, the United States Centers for Disease Control (CDC), the American College of Cardiology, the National Heart, Lung and Blood Institute (NHLBI), the Heart and Stroke Foundation of Canada and the World Heart Federation. In plenary and concurrent oral and poster sessions, participants explored the disturbing trends which have the greatest impact on the progression of cardiovascular disease and discussed behavioural, pharmacological and public-policy approaches to the prevention, treatment and management of heart disease and stroke. Policy perspectives with international applications were also discussed.

The Sixth International Conference on Preventive Cardiology was jointly organized by the World Heart Federation and its Scientific Council on Epidemiology and Prevention, with the involvement of the Interamerican Society of Cardiology and the InterAmerican Heart Foundation. The theme of the

conference, "Protecting the Heart of Global Development", highlighted the importance of protecting cardiovascular health as a resource for human, economic and social development, especially in low and middle income countries, where many productive years of life are lost owing to the increasing burden of cardiovascular disease.

The conference drew over 800 participants from 65 countries and from diverse disciplines and interest groups. A broad coalition of organizations, whose strengths ranged from academic research to advocacy, came together on the common platform provided by the International Conference to shape the agenda for collaborative action to promote global cardiovascular health. The scientific programme of the conference, which featured early-bird lectures, plenaries, keynote addresses, symposiums and workshops, followed four principal themes: the burden of cardiovascular disease and its risk factors; population-based strategies for prevention; individual approaches to cardiovascular risk reduction; capacity-building for global cardiovascular health promotion.

The conference produced a number of clear messages focused on the rising burden of cardiovascular disease, which now poses a major threat to all regions of the world and destabilizes the development process in low and middle income countries. The evidence base for effective intervention is available, but further investment is now needed to increase capacity and apply knowledge and interventions more widely.

In addition to the two congresses mentioned above, the World Heart Federation was closely involved in the preparation of the forthcoming World Congress of Cardiology, to be held in Barcelona in September 2006. This congress will bring together the XVth World Congress of Cardiology of the World Heart Federation and the 2006 Congress of the European Society of Cardiology, thus combining the strengths of the two organizations and attracting a large number of people from all over the world. The theme highlighted during the congress will be

# Activities

“cardiovascular diseases and ageing”, specifically examining the gap between recommendations and management in practice of cardiovascular disease in old age. Included in the programme will be a World Heart Federation Science Initiatives track, focusing on issues related to the prevention and control of cardiovascular disease in low and middle income countries.

## Journals

The World Heart Federation launched its new quarterly journal, *Prevention and Control* at the Sixth International Conference on Preventive Cardiology in May 2005. The journal, which seeks to provide a forum for dialogue and education on matters relating to the prevention and control of cardiovascular disease worldwide, targets cardiologists, primary care professionals (general practitioners, nurses), patients, the public health community and policy-makers. Approaches that can be applied in settings with limited resources are emphasized and submissions from developing countries are specifically encouraged. At the end of 2005, subscriptions had been received from more than 260 individuals, while over 2 300 institutes with broad geographical representation had licenses to access the journal online.

Towards the end of the year, the World Heart Federation entered into discussions with the Nature Publishing Group to adopt *Nature Clinical Practice Cardiovascular Medicine* as an official publication in 2006. This journal provides the practising clinician with a comprehensive overview of the most up-to-date literature relevant to the diagnosis and management of patients with cardiovascular disease.

## Scientific Advisory Board and Councils

The World Heart Federation Scientific Advisory Board supports the organization’s mission by ensuring the scientific foundation for its activities and through the work carried out by its three Scientific Councils on Clinical Cardiology, Epidemiology and Prevention, and Rheumatic Fever/Rheumatic Heart Disease (RF/RHD).

In 2005, the Council on Clinical Cardiology concentrated its efforts firstly on the scientific programme of the World Congress of Cardiology, to take place in September 2006, and secondly on the content and attendance of postgraduate training courses for physicians from developing countries, to be held in India and Bolivia in 2006. It also identified the key areas on which it wishes to focus in order to assist primary-care physicians in low and middle income countries – arrhythmia, coronary heart disease, valvular heart disease and interventional cardiology.

In addition to organizing the Sixth International Conference on Preventive Cardiology, the Council on Epidemiology and Prevention held its 38th Ten Day International Teaching Seminar on Cardiovascular Epidemiology and Prevention in Bouficha, Tunisia, in September. This annual seminar brought together 34 fellows and faculty from 20 different countries, with the common aim of increasing the group of people around the world active in epidemiological research and its application to the prevention of cardiovascular disease. Each working day was divided between lectures and group activity, including the preparation of a study protocol. On the final day of the seminar, each group presented its proposed study design, followed by a final summing-up of some of the major issues in epidemiological research. This unique annual seminar offers a well-tested and very successful model to help to meet the critical need for trained professionals in the field of epidemiology, who can then contribute to strengthening their home countries’ capacity to set up and deliver effective public health policies.

A major accomplishment of the Council on RF/RHD was the establishment of the South Pacific RF/RHD Secondary Prevention Programme (described under “Demonstration projects” above). The programme’s approach was discussed at length during the First Pan-African RHD Control Workshop, convened in Drakensberg, South Africa by the Pan-African Society of Cardiology. The meeting resulted in the Drakensberg

# Activities

Declaration on the Control of RF and RHD in Africa, which recognized the very heavy burden of this disease on the African continent and committed the signatories to developing, implementing and evaluating a common, continent-wide programme concentrating on four areas of activity: awareness, surveillance, advocacy and prevention. On an international level, the Council on RF/RHD initiated the establishment of the World Heart Federation Global Centre of Excellence in RHD Control. The aim of the Centre is to serve as a global clearinghouse for RHD educational and health promotional materials and to support the activities of the Council as the leading authority in global RHD control.

## **Training and capacity-building**

Specific World Heart Federation training and capacity-building initiatives included the development of a global curriculum on preventive cardiology, the Twin Centres fellowship programme and workshops for heart foundations.

The World Heart Federation's efforts to develop a global curriculum on preventive cardiology continued in 2005. The curriculum, targeted at medical students, aims to bring together core knowledge and skills pertaining to the prevention of cardiovascular disease. The year 2005 saw the convening of an international curriculum education and training committee, comprising nine members with worldwide geographical representation, who worked on finalizing the curriculum content. The purpose of the Twin Centres fellowship programme is to enhance the quality and capacity of cardiology centres in less advantaged countries or regions. This is achieved through the development of formal structural links between them and leading centres or institutions that have already established high-quality programmes, encompassing outstanding preventive care, clinical cardiology, research and training. Cardiologists from Georgia, Nigeria and Zambia received grants from the World Heart Federation in 2005 to undertake

a year's traineeship in centres in Spain, South Africa and Germany, respectively.

The World Heart Federation placed specific emphasis this year on developing the capacity of heart foundations in fields such as strategic planning, programme management, fundraising and media relations, in order to help heart foundations acquire the skills they need to function as efficient civil-society organizations. The World Heart Federation was involved in running three workshops during the year: in Brazil for members of the InterAmerican Heart Foundation, in India for the Asia Pacific Heart Network and in Cameroon for the African Heart Network.

The membership of the African Heart Network continued to grow with "Un Coeur pour la Vie", the heart foundation from Congo Brazzaville, joining the network alongside member organizations from Benin, Cameroon, Ghana, Kenya, Mozambique, Nigeria, South Africa, Sudan and Tunisia. A very informative newsletter was born in 2005, providing a much needed tool for communication between member organizations. During the African Heart Network's annual meeting, held in Yaoundé, Cameroon, in December, members were able to share experiences and best practice in a number of fields, notably community-based projects and those aimed at raising awareness of RF/RHD.

The Asia-Pacific Heart Network likewise went from strength to strength. At its annual meeting, held in Mumbai, India, in December, the Asia-Pacific Heart Network carried out a strategy review and fixed its priorities for the years to come. These include: capacity-building among its membership; fundraising, involving the hiring of a fundraising consultant based in the Philippines; communication with its members and the creation of a newsletter.

# Partnerships

The World Heart Federation works in partnership with numerous organizations that share a commitment to health promotion and to preventing and controlling cardiovascular disease.

## United Nations

The close collaboration with the World Health Organization (WHO) continued in 2005, notably in the publication and dissemination of a number of reports. The World Heart Federation participated in the WHO report *Preventing chronic disease: a vital investment*, launched in October 2005, demonstrating the full extent of the global burden of cardiovascular disease and other chronic diseases. The Federation and its member societies strongly supported the report's call for increased and urgent action for the prevention and control of chronic diseases and the new goal set by WHO to reduce the worldwide death rate from chronic disease by 2% per year over the next 10 years, in order to prevent as many as 36 million premature deaths by 2015.

The World Heart Federation's partnership with the United Nations Educational, Scientific and Cultural Organization (UNESCO) continued, focusing on World Heart Day. UNESCO distributed the World Heart Day materials to its 170 offices worldwide and supplied leaflets to 7 300 schools in the Associated Schools Project network.

Finally, the World Heart Federation was one of the partner organizations in "Sport 2005", the United Nations International Year of Sport and Physical Education.

## Nongovernmental organizations

The World Heart Federation works very closely with other international nongovernmental organizations active in public health. One of the most important initiatives in 2005, as mentioned in the chapter on "Advocacy", was the launch of the Global Alliance for the Prevention of Obesity and Related Chronic Disease, with the International Association for the Study of Obesity, the International Obesity Taskforce, the International Diabetes Federation, the International Union of Nutritional Sciences and the International Pediatric Association. The Alliance's goal is to transform the WHO

Global Strategy on Diet, Physical Activity and Health into practical in-country obesity prevention programmes, specifically aimed at the prevention of childhood obesity.

Exciting new partnerships were created with Sesame Workshop as well as the Indian organization Hriday-Shan, focusing on educating children on healthy lifestyles and promoting health awareness among young people (see Colombia Model Youth Programme under "Demonstration Projects" above).

## Industry/World Economic Forum

The World Heart Federation continues to work with a select group of industry partners committed to the cause of global cardiovascular health. The partnership with Bayer Healthcare begun in 2004 aims to aid the World Heart Federation in its mission to educate the public and healthcare professionals on the risks of cardiovascular disease and to assist in implementing treatment guidelines. GlaxoSmithKline has continued to be a valuable partner, helping the World Heart Federation to advocate for the inclusion of cardiovascular disease on the global health agenda. In addition, along with Pfizer, GlaxoSmithKline has renewed its support for the Grenada Heart Project (see "Demonstration Projects" above). A successful new partnership was launched in 2005 with the sanofi-aventis group, highlighting the need for research and awareness related to risk factors for cardiovascular disease, such as abdominal obesity and metabolic syndrome. Finally, the partnership with Unilever Bestfoods, now in its third year, maintained its focus on raising awareness of lifestyle risk factors among the general public. A new partnership with the World Economic Forum, focused on workplace wellness, was launched in November 2005, with backing from the food and beverage, sports, pharmaceutical and communications industries. The World Heart Federation is involved in an advisory capacity in the programme, which seeks to increase corporate commitment to improving the health, wellness and physical fitness of employees.

## World Heart Federation Board 2005-2006

Front row (from left to right):

Shahryar Sheikh, MD (President Elect 2005-06)  
Sania Nishtar, MD (Chairman Foundations' Advisory Board 2003-06)  
Valentin Fuster, MD, PhD (President 2005-06)  
Marco Martinez-Rios, MD (Representative of InterAmerican Society of Cardiology)  
Albert Amoah, MD (Representative of Pan-African Society of Cardiology)  
Janet Voûte (Chief Executive Officer)  
Laksmiati Hanafiah (Vice-President 2005-06)

Second row (from left to right):

Edgardo Escobar\*, MD (Chairman Clinical Cardiology Council)  
Ayrton Brandão, MD (Secretary 2003-06)  
Sidney Smith, MD (Chairman Scientific Advisory Board 2005-08)  
Philip Poole-Wilson, MD (Past President 2005-06)  
Shigetake Sasayama, MD (Representative of Asia-Pacific Society of Cardiology)  
Oladipo Akinkugbe, MD (Representative of African Heart Network)  
Srinath Reddy\*, MD (Chairman Epidemiology & Prevention Council)

Third row (from left to right):

Edward F. Hines, Jr. (Treasurer 2003-06)  
Jonathan Carapetis\*, MD (Chairman Rheumatic Fever/Rheumatic Heart Disease Council)  
Marilyn Hunn\* (Director of Science Operations)  
Andy Wielgosz, MD (Editor, Prevention and Control Journal)

Thomas Pearson, MD, PhD (Member at Large)  
Boudewijn de Blij (Vice-President Elect 2005-06)

Board members not present when photograph was taken:  
Ruth Collins-Nakai, MD (Representative of InterAmerican Society of Cardiology)

Peter Hollins (Representative of European Heart Network)  
Cumaraswamy Sivathasan, MD (Representative of Asia-Pacific Society of Cardiology)

Sergio Timerman, MD, PhD (Representative of InterAmerican Heart Foundation)

William Wijns, MD, FESC (Representative of European Heart Network)

Elinor Wilson, PhD, RN (Past Vice-President 2005-06)

# Report of the auditors to the General Assembly

**PricewaterhouseCoopers SA**  
Avenue Giuseppe-Motta 50  
Case postale 2895  
1211 Genève 2  
Telephone +41 58 792 9111  
Fax +41 58 792 9128

Report of the auditors  
to the General Assembly of  
the World Heart Federation  
Geneva

As auditors, we have audited the accounting records and the financial statements on pages 20 to 32 (statement of receipts and operating expenditure, statement of assets, liabilities and reserve funds, cash flow statement, statement of changes in reserve funds and notes) of the World Heart Federation for the year ended 31 December 2005.

These financial statements are the responsibility of the Board. Our responsibility is to express an opinion on these financial statements based on our audit. We confirm that we meet the legal requirements concerning professional qualification and independence.

Our audit was conducted in accordance with auditing standards promulgated by the Swiss profession, which require that an audit be planned and performed to obtain reasonable assurance about whether the financial statements are free from material misstatement. We have examined, on a test basis, evidence supporting the amounts and disclosures in the financial statements. We have also assessed the accounting principles used, significant estimates made and the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the financial statements give a true and fair view of the financial position, the results of operations and the cash flows in accordance with the Swiss GAAP FER and comply with Swiss law and the World Heart Federation's bylaws.

We recommend that the financial statements submitted to you be approved.

# Note 1 - Summary of significant accounting policies

## 1a Introduction

The financial statements of World Heart Federation («the Federation») have been prepared in accordance with the Swiss Accounting and Reporting Recommendations FER/ARR («Swiss GAAP») and in conformity with Swiss law.

## 1b Basis of presentation

The financial statements are prepared under the historical cost convention and on an accrual basis. These financial statements give a true and fair view of the financial position and the results of the Federation.

Operating receipts are recorded as income on an accrual basis, according to the date of contract, or, if no contract exists, date of invoice.

Revenues and expenses are classified based on the existence or absence of donor-imposed restrictions. Restricted income received is allocated to the Restricted Income reserve, while expenses incurred on restricted projects are withdrawn from the Restricted Income reserve.

## 1c Foreign currency translation

The Federation's accounting records are maintained in Swiss francs. Monetary assets and liabilities denominated in currencies other than the Swiss franc are recorded on the basis of exchange rates ruling at the balance sheet date.

Income and expenditure in currencies other than the Swiss franc are recorded on the basis of exchange rates at the transaction date.

## 1d Accounts receivable

Amounts recorded as accounts receivable represent amounts invoiced or earned contractually at each balance sheet date but not yet received. No allowance has been made for uncollectible amounts, as management believes that all receivables balances at each balance sheet date are fully collectible.

## 1e Investments

Investments consist of equity and debt securities that are traded by the Federation's authorised custodians in liquid markets. Investments are shown in the financial statements at market value at each balance sheet date.

## 1f Fixed assets

Fixed assets are stated at acquisition cost less depreciation. Depreciation is calculated and charged using the straight-line method to allocate their cost to their residual values over their estimated useful lives, which range from 3-5 years.

## 1g Deferred income

Deferred income represents membership fees that were invoiced before the balance sheet date, which are recognised in the Statement of Receipts and Operating Expenditure in the following year.

## Note 2 - Membership fees recognised in the year ended December 31, 2005
