

IMPACT OF COVID-19 ON HEALTH

People living with CVD are more vulnerable to severe COVID-19.¹ Heart health must be a priority, despite the current disruptions. The World Heart Federation is committed to raising awareness of the impacts of COVID-19 on heart health and helping patients stay on track.

INCREASE IN DEATHS RELATED TO CVD

58%
increase in people having cardiac arrests at home²

UP TO 139%
increase in heart disease-related deaths³

Higher mortality and severe illness among people living with CVD⁴

64% decrease in cardiac diagnosis procedures⁵

AROUND THE WORLD

% of countries experiencing disruptions⁶

Drop in patient attendance

Medical staff redeployed to provide COVID-19 relief

Lockdowns impacting access

Insufficient personal protective equipment (PPE) available for healthcare workers

Heart health services disrupted⁷

Rehabilitation

Hypertension

Diabetes

Cardiovascular emergencies

Fear and mistrust also recorded as reasons for drop in attendance⁶

GLOBAL DISPARITIES⁶

Cardiovascular emergency services disrupted in 50% of low-income and 17% of high-income countries

RESPONDING TO COVID-19 CHALLENGES

Refocusing public health information communications⁶

Triaging to identify priorities⁶

Innovation in access such as telemedicine and digital health⁶
